Optional Equipment	2.5 R5 TDI	3.6 V6 FSI	3.0 V6 TDI	5.0 V10 TDI
4 zone climate control dual air conditioning system	0	0	0	S
Air suspension with Continuous Damping Control (CDC) with 5" colour multi-function trip computer display Only available in conjunction with Bi-xenon headlights	-	0	0	S
Alloy wheels, Atheo 19 x 9" with 275/45 R19 tyres	-	0	0	S
Alloy wheels, Mountain 20 x 9" with 275/40 R20 tyres	-	-	-	0
Alloy spare wheel, hinged carrier mounted to rear Not available in conjunction with Mountain 20" alloy wheels or automatic tailgate	0	0	0	0
Automatic opening and closing tailgate	0	0	0	0
Bi-xenon headlights with cornering lights, cleaning system and automatic self levelling	0	0	0	S
Cricket leather upholstery package includes 12-way electric and individually heated front seats and heated washer nozzles	P¹	S	S	-
Electric glass slide/tilt sunroof with sunblind	0	0	0	0
Memory package, includes front seats, steering wheel, door mirrors and front seat belt height	-	P ²	P ²	S
Metallic / pearl-effect paint	0	0	0	0
Rear seat DVD entertainment system, roof mounted 7" colour screen with headsets and remote control Not available in conjunction with electric glass slide/tilt sunroof	0	0	0	0
Satellite navigation system, with large format 7" colour map screen and 5" colour multi-function trip computer display	0	0	0	0
Tow bar rated to 3500kg braked towing capacity and 350kg down weight Tow bar tongue and tow ball Volkswagen Genuine Accessories sold separately	0	0	0	0
Walnut wood / brushed aluminium inserts in dashboard and doors	0	S	S	0
Wood/leather multi-function steering wheel	-	0	0	0

Glossary

4XMOTION

The power of the Touareg engine is transmitted to the wheels via the continuous 4XMOTION four-wheel drive system. This flow of power is handled by a transfer gearbox, which includes off-road reduction. The 4XMOTION system also includes a locking central differential.

In normal situations - dry road, even grip, constant engine power - the four-wheel drive is distinguished by a symmetrical, 50:50 distribution of power to the front and rear axles. But as soon as a wheel begins to slip, the multi-disc lock of the central differential increases the flow of power (up to 100%) to one axle in order to provide more grip. A four-wheel EDL (Electronic Differential Lock via braking) also supports this adjusted power distribution.

Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

Glossary (cont'd)

Brake Assist

During emergency braking, Brake assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system. Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction. EDL is active on both axles in forward and reverse and operates up to 40 km/h.

Anti-Slip Regulation (ASR)

ASR is a switchable traction control system that prevents the wheels from spinning under acceleration by reducing engine torque. It is active at speeds above 40km/h.

Electronic Stabilisation Program (ESP)

ABS, EDL and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with predetermined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also prevents spinning off on a curve due to either understeer or oversteer.

Engine Braking Control (EDC)

Prevents the driven wheels from locking if the accelerator is lifted very suddenly or the vehicle is braked sharply because a low gear is engaged.

Hill descent assistance

Ensures by means of controlled brake applications that the vehicle does not go out of control when descending a steep hill. Hill descent assistance will only operate in low range.

Hill holding assistance

The hill holding assistance comes into affect when stationary on steep inclines, utilising the transmission as necessary to prevent the vehicle rolling back.

Volkswagen is distributed by Volkswagen Group Australia Pty Ltd, The Lakes Business Park, 6 Lord Street, Botany, NSW 2019. ABN 14 093 117 876. Specifications are as planned at November 2006, for Model Year 2007 and are subject to change without notice or obligation. All information is this specification sheet is correct at the time of publication, however variations may occur from time to time and Volkswagen, in so far as it is permitted by law to do so, shall not be liable in any way as a result of any reliance by any person on anything contained in this specification sheet. Authorised Volkswagen dealers will provide up-to-date information on model application, design feature, prices and availability on request.
